

At Advanced Pain and Spine Institute, we are dedicated to treating both acute and chronic pain. Each patient is given an extensive initial evaluation that includes a personal interview and physical examination as well as a thorough review of all prior medical records, labs, and imaging studies. We then tailor a treatment plan individualized for each patient. We believe in treating the entire person, as pain affects not only the physical aspects of your life but also your mind, spirit, personal relationships, jobs, family, and emotional well being. We have multiple medical modalities to treat pain. These include medications, physical therapy, pain psychotherapy, and interventional pain procedures.
